**PROJECT NAME**  
Sno-Cove Waterpark

Engineered for strength...  
designed for beauty

The aggressive terrain of the Sno-Cove Water Park presented several challenges which were all met by use of the Cornerstone 100 unit. The tallest structures on the site topped out at nearly 52' and standard geogrid practices were used. Pro-Gro Landscape, Inc. worked through the winter months on the fast track project in order to keep on schedule. They truly appreciated the fact that they did not have to fumble with clumsy pins or connectors due to the Cornerstone 100's Secure Lug connection. A total of seven walls were constructed at the site consisting of gravity and geogrid reinforced designs. The superior strength and ease of construction made the Cornerstone 100 unit a perfect fit to the job.
