PROJECT NAME

K.C.D. Realty

Engineered for strength...
designed for beauty

The K.C.D. Realty project used the StoneLedge™ six inch Ashlar product to create a twenty-two foot triple terraced green wall.

StoneLedge™, along with a professionally engineered geogrid design, provided structural reinforcement for the renovation of an older building as well as a dramatic enhancement to the beauty of the site.

Two blended colors were intermixed to soften the color scheme and provide an authentic natural appearance. The wall was topped by a four foot double-sided screen wall while the multi-height landscaped terraces were nearly defined using contrasting solid colored caps.
