

Connect Elegant Looks with Flexible Design Details

The double-sided splitface VistaCourt™ unit is extremely versatile for retaining walls of all sizes using either near vertical or set-back applications. At 6"x18" it provides the installer with a tremendous advantage compared with many 6" high products on the market today, allowing the unit to cover more square footage with every unit placed.

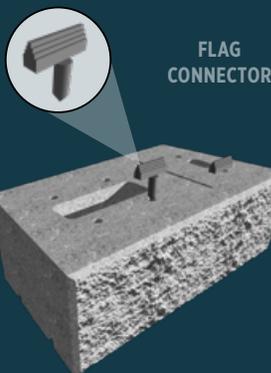

- ✓ Freestanding
- ✓ Curves & Corners
- ✓ Seating
- ✓ Random Patterns
- ✓ Steps
- ✓ Terraced Walls
- ✓ Pillars

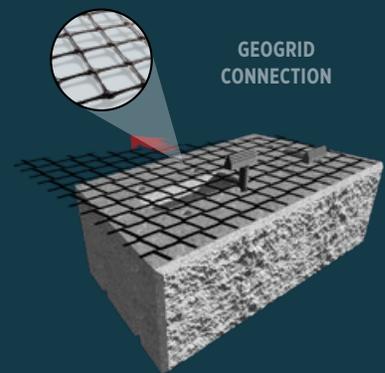

2-in-1 Wall System

Create corner units by splitting the VistaCourt™ unit along the splitting groove. The 18" unit will make 6" and 12" units that can be used for making corners, pillars, and random patterns.

Batter and Setback

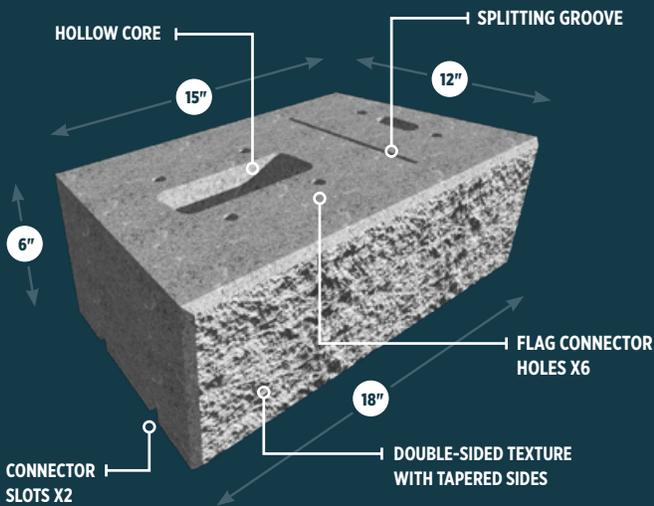

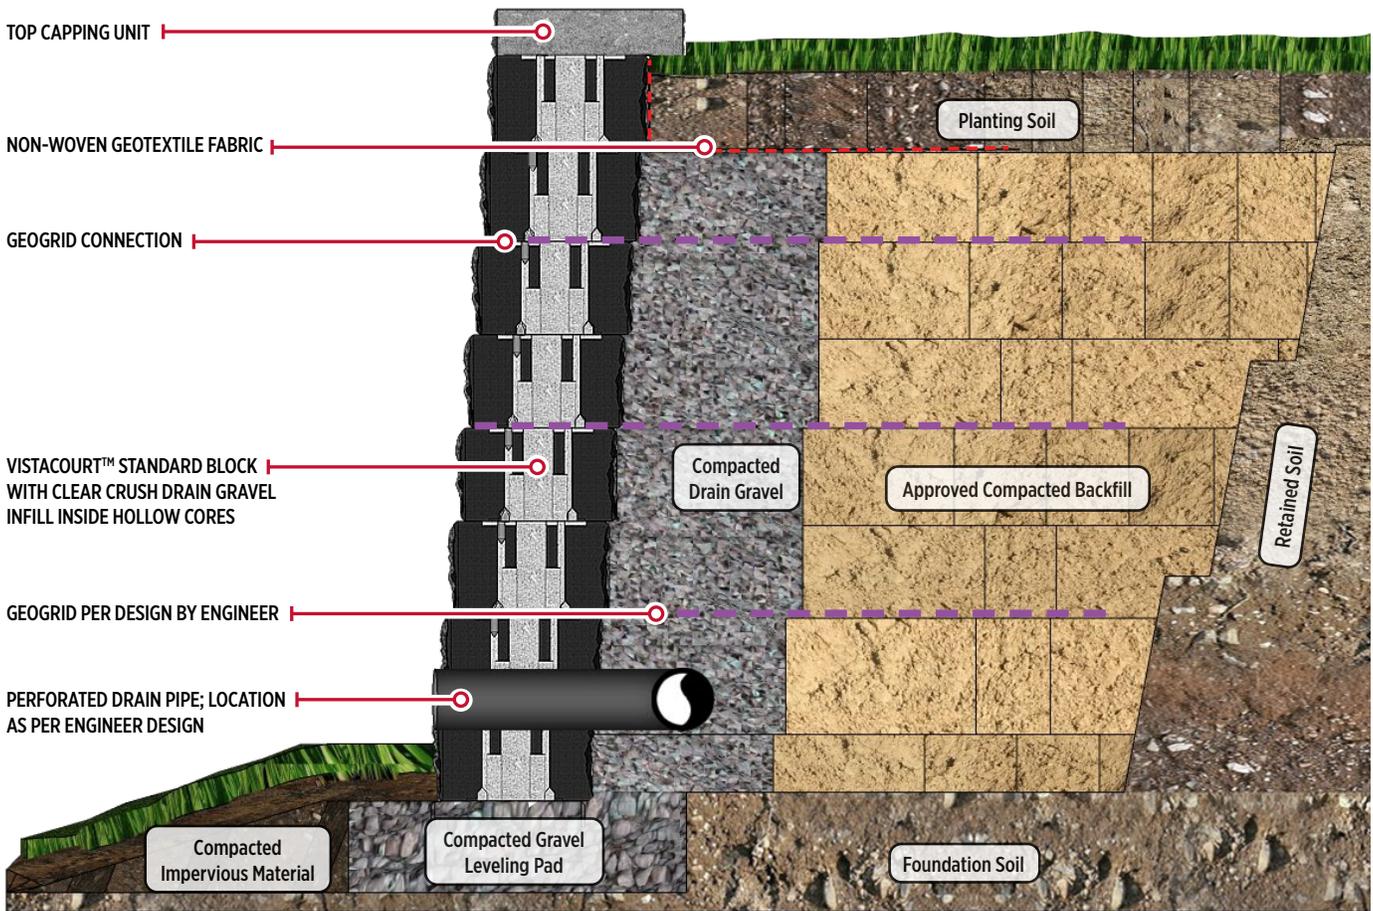

The VistaCourt™ wall can be built in a setback, vertical, or multi-setback position. Place the flag connectors in the forward holes with the flag in the back position to create a batter or rotate the flag forward to create a vertical wall.

Better Connection

VistaCourt™ units provide excellent solutions for gravity, geogrid reinforced, battered or vertical, terraced designs and other types of wall structures.

Geogrid Wall Cross Section
